

**Rosacea affects more than 14 million Americans.
Unfortunately, spotting them is easy.**

MetroCream®

Stand Out for the Right Reasons.

The symptoms of rosacea are hard to deny, yet that's exactly what many of its sufferers do – they deny their persistent facial flushing, recurring pimples, red bumps and burning as a temporary problem. Are you one of them?

Many treat flare-ups with over the counter acne medications; however, this can further aggravate the disorder. In more extreme conditions tiny blood vessels may appear on the face. Some might even experience skin thickening, or rhinophyma which most commonly occurs upon the nose.

In addition to its dermatological effects, rosacea lowers self-esteem and hurts self-confidence. People with symptoms avoid face-to-face contact and experience a negative affect upon both their personal and professional lives.

If you suffer from rosacea flare-ups, **MetroCream** therapy will help you become "just another face in the crowd" again. For more information, consult with a dermatologist and refer to our website at www.metrocream.com.

**He knows he has Rosacea.
Too bad everyone else knows it too.**

MetroCream®

Stand Out for the Right Reasons.

He stands quietly in the back, hidden away; fearful he'll be judged more by his appearance than by the person he is. If it was his choice, you wouldn't even see him.

Who is he? He's one of the more than 14 million Americans suffering from the affects of the condition known as rosacea. Are you a rosacea sufferer too?

Symptoms include persistent facial flushing and burning, recurring pimples and red bumps. Many sufferers treat flare-ups with over the counter acne medications; however, this can further aggravate their condition.

Rosacea lowers self-esteem and hurts self-confidence. Sufferers avoid face-to-face contact and experience a negative affect on both their personal and professional lives.

Stop hiding behind the red veil of rosacea; control symptoms with **MetroCream** therapy. To learn more about rosacea and its treatment, consult with a dermatologist and refer to our website at www.metrocream.com.
